

Directions for Loading and Running *The Search Series* on the Apple

1. Insert the disk in DRIVE 0 (label up, notch on left). Close door.
2. Turn on the computer.
3. The *Search* program begins.
4. Leave the disk in the computer for the duration of the session. Before removing it, wait until the computer displays the beginning of another group's turn. This allows the computer to update the disk with information from the previous turn.

Your Backup *Search* Disk

Both an original and a backup copy of your *Search* program disk are included herewith as provided for in your licensing agreement with McGraw-Hill.
